Dear Reviewer,

Thank you for your valuable comments on our glmmBUGS paper. We've made changes according to your comments as follows:

- I've included the two R packages (MCMCglmm and glmmGibbs) into the discussion section and put the information into the bibliography section too.
- We are considering generating a super function which included all the functions from the glmmBUGS package.
- I've added the argument "model.file = "model.bug" in the bugs function and a comment that it can be omitted.
- I've added a section "pre and post-WinBUGS command" between the two examples, outline the usage of the functions briefly and when to use those functions.
- I've tidy up the R codes, so that it won't print outside the margins.

Regards,

Lutong Zhou
